

Pre-heating furnaces

HP100 **Ref. 080148**

HP50 **Ref. 080144**

HP25 **Ref. 080142**

Extremely high performance pre-heating furnace family, composed of three models with different muffle capacity (2.5, 5 and 10 litres). Made of stainless steel, the most convenient material for the extraordinary thermic requirements this kind of devices has to bear. The high quality of the muffle ensures an exceptionally long working life, even when continuously working at temperatures near 1100 °C. When the thermocouple fails, the electronic control will announce it. This element is very economical and easy to replace by the user himself. On the other hand, the electronic control allows the programming of cycles composed of multiple parameters; you can define ramps and plateaus with temperatures, maintenance times, heating in a determined time or in degrees per minute. The memory can store up to twenty different programmes. The furnace is factory supplied with a ceramic tray.
